Confirm Password:

Create/Successful

Create/Unsuccessful

In a real-life app, with server hosting, the sign in credentials would be fully operational through a single button(Create).

But in this case we input two buttons, Create/Successful and Create/Unsuccessful for Authentication.

This is our HomePage which will contain a description about Walk it Off!, a sum of the distance you travelled and whats new in the market for you.

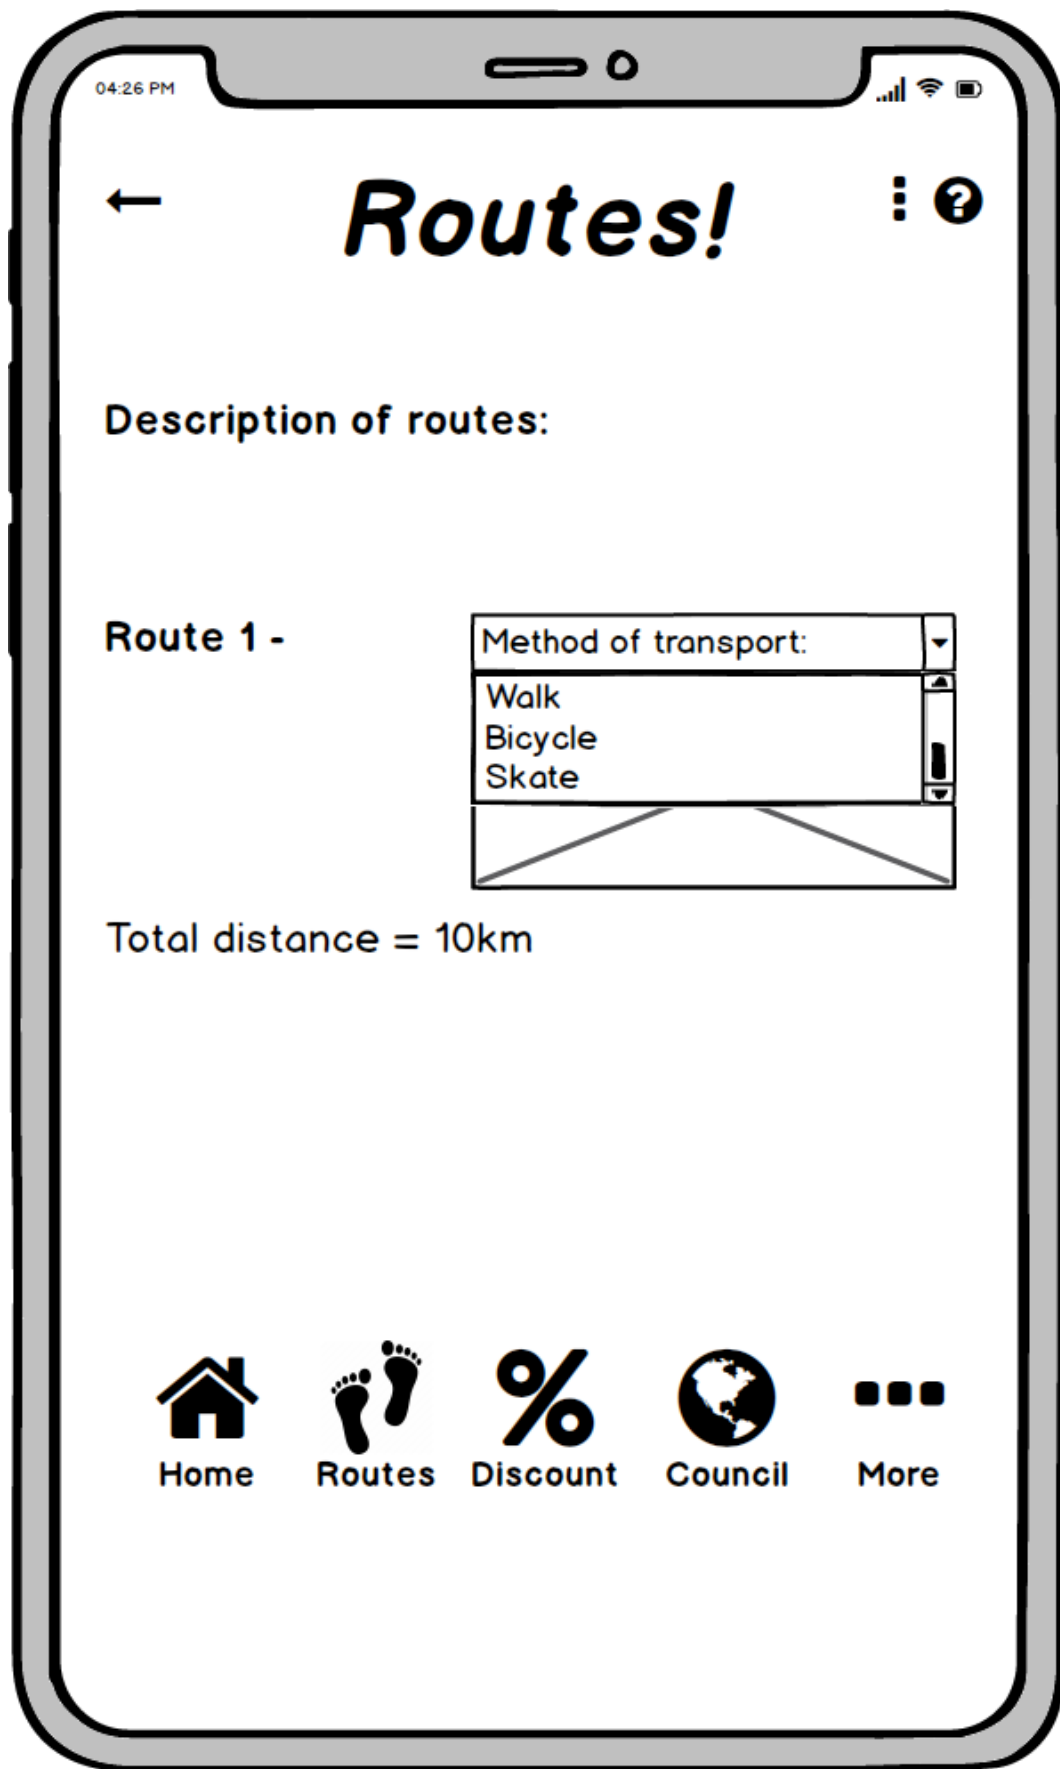

This is our routes page which will contain a description about how it works along with a search bar and routes located near your area.

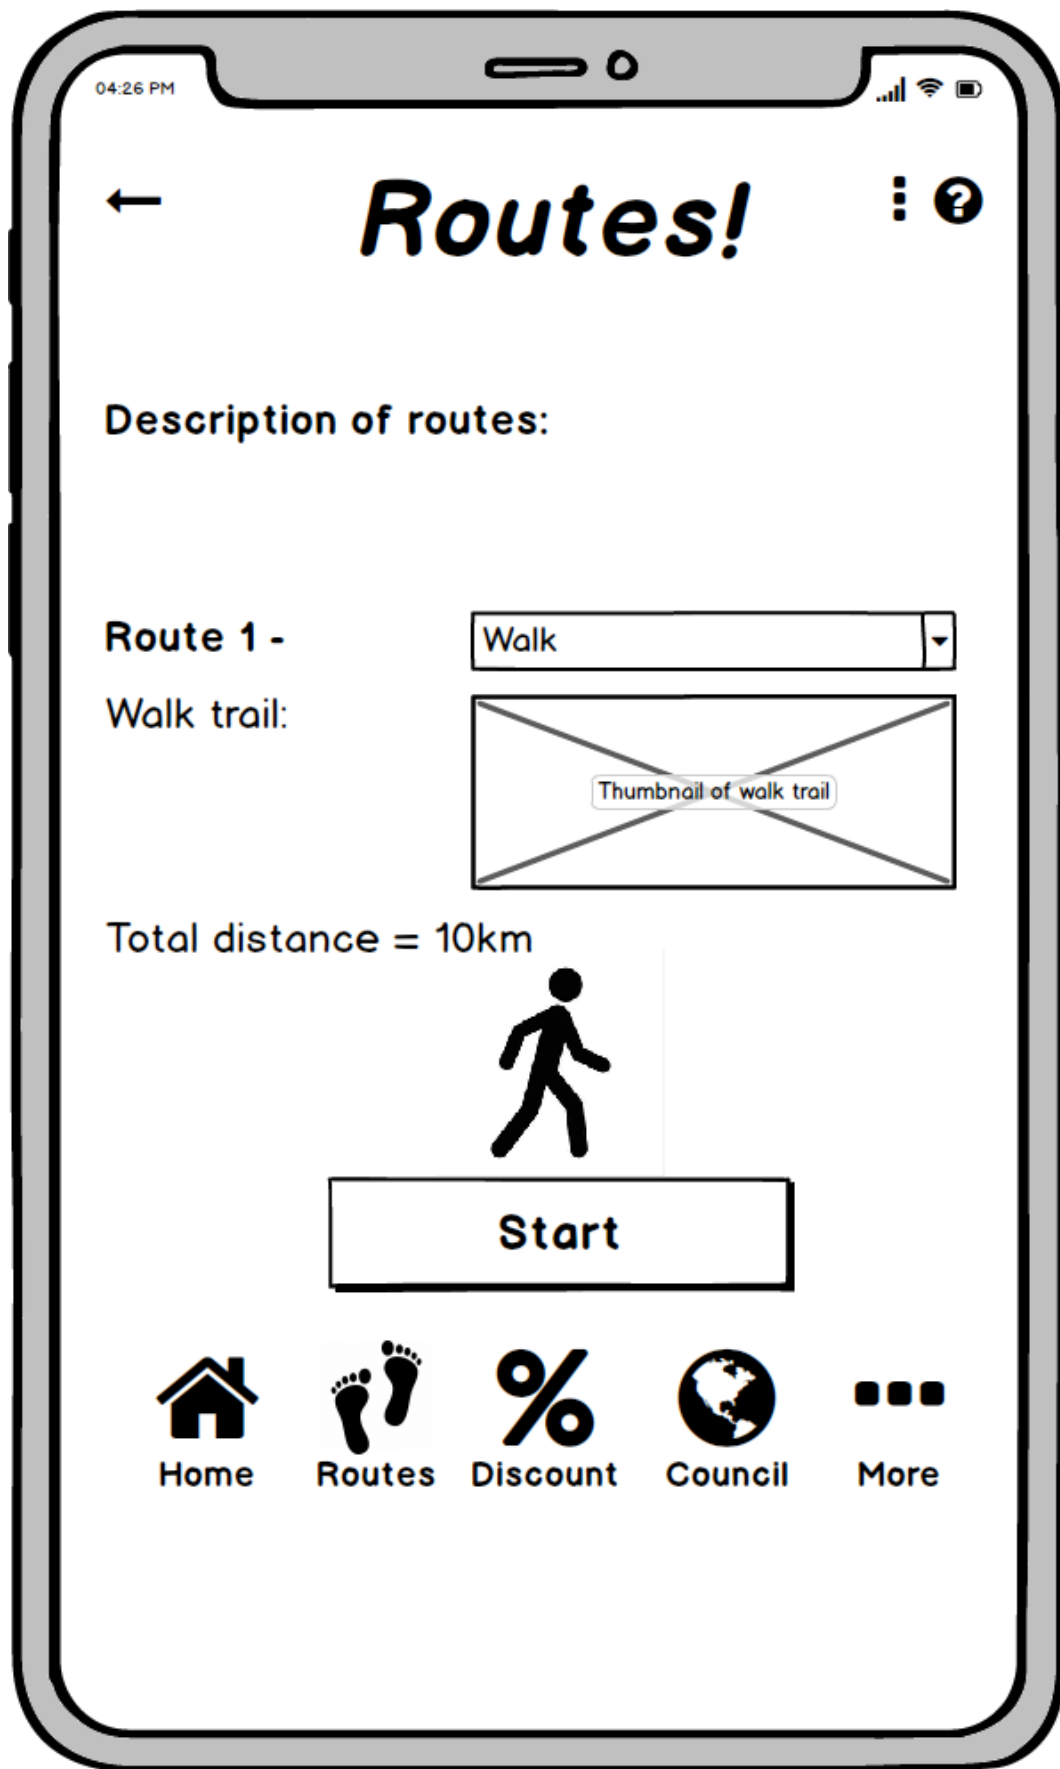

This page will be a selected route which includes the total distance and method of transport.

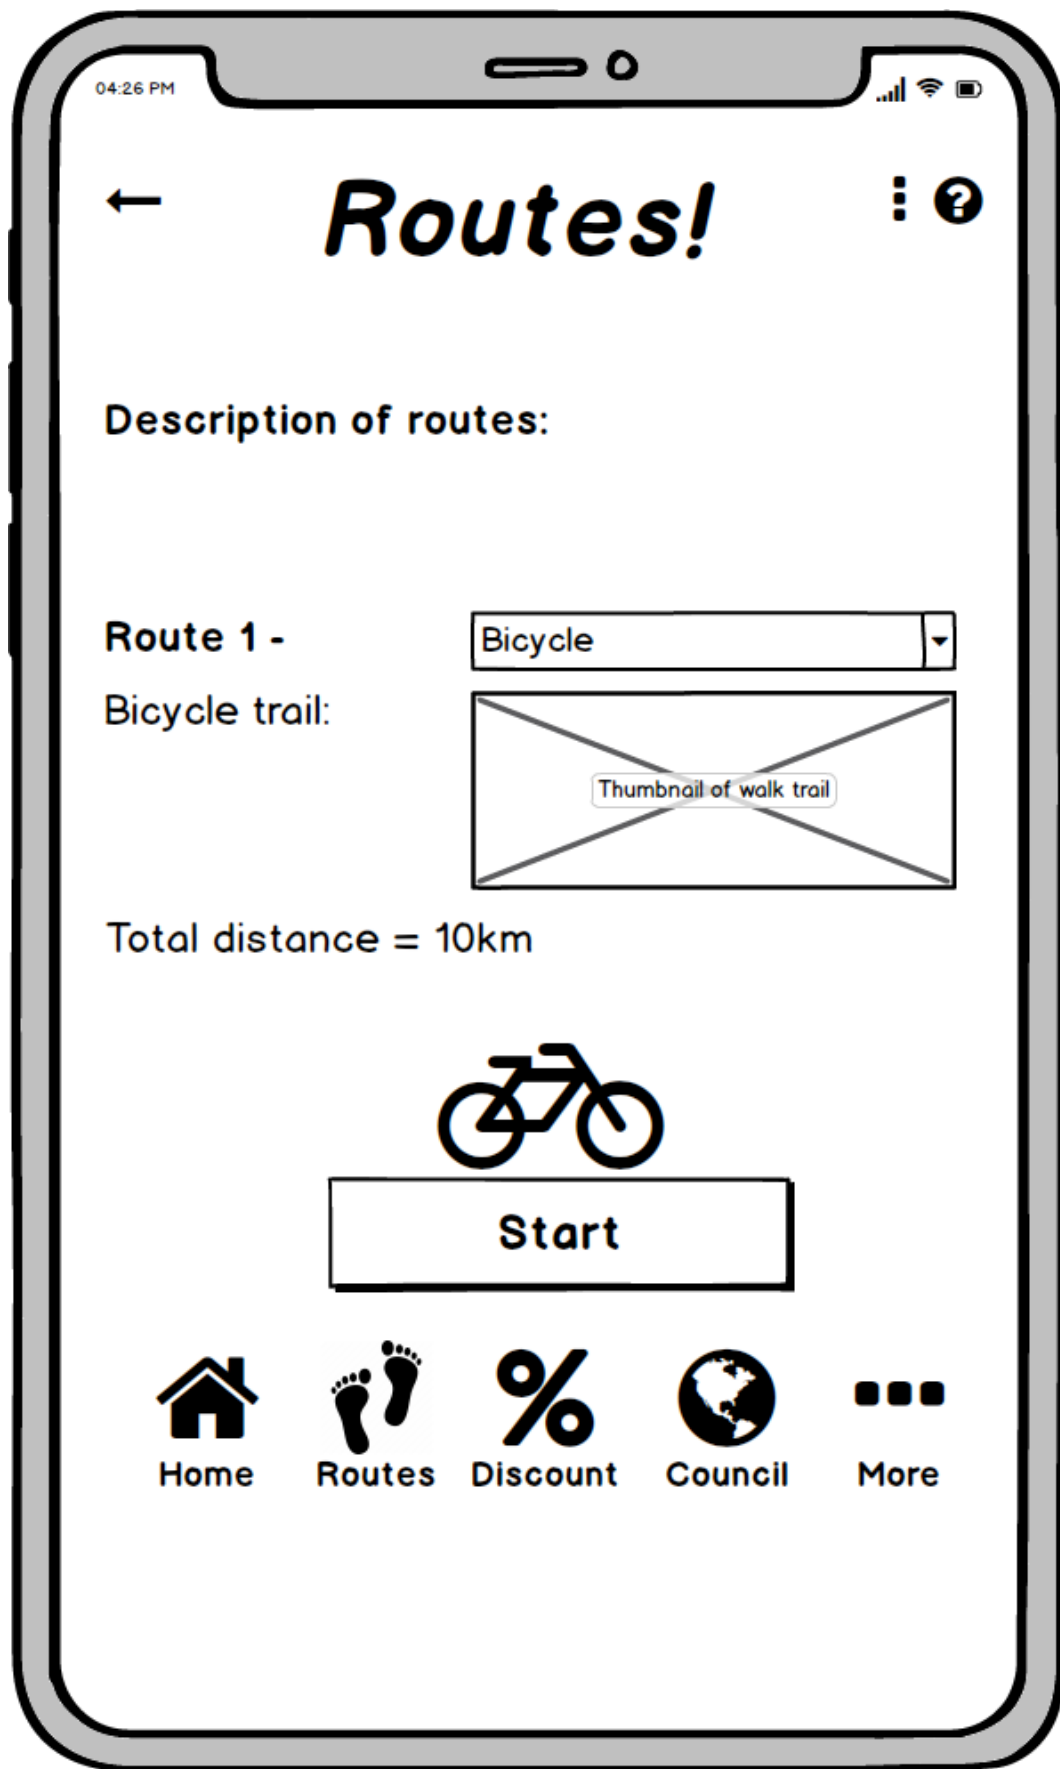

Here, you can choose walk, bike or skate. Depending on which method you choose, certain discount points will be rewarded, which you use to unlock discounts on healthy foods.

Since we are promoting healthy living, certain parameters with speed will be included. So, we can prevent cars abusing the system.

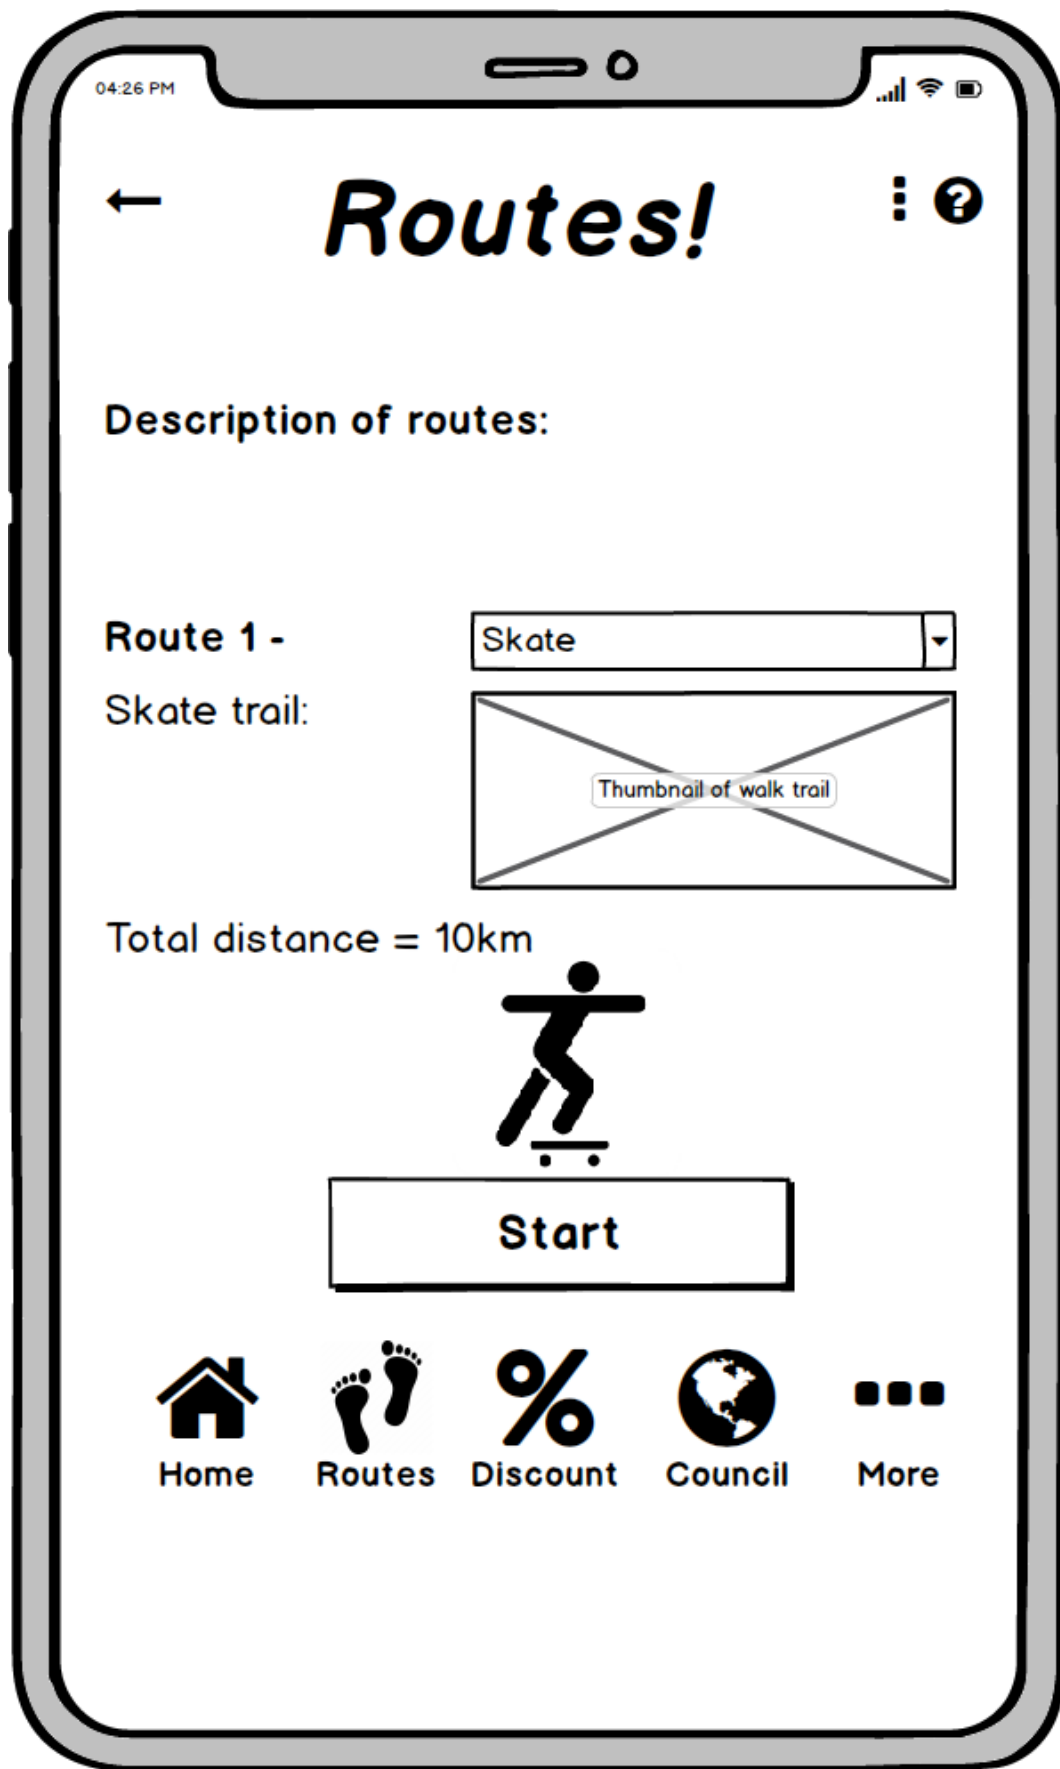

This is the walk trail page.

Press start to begin.

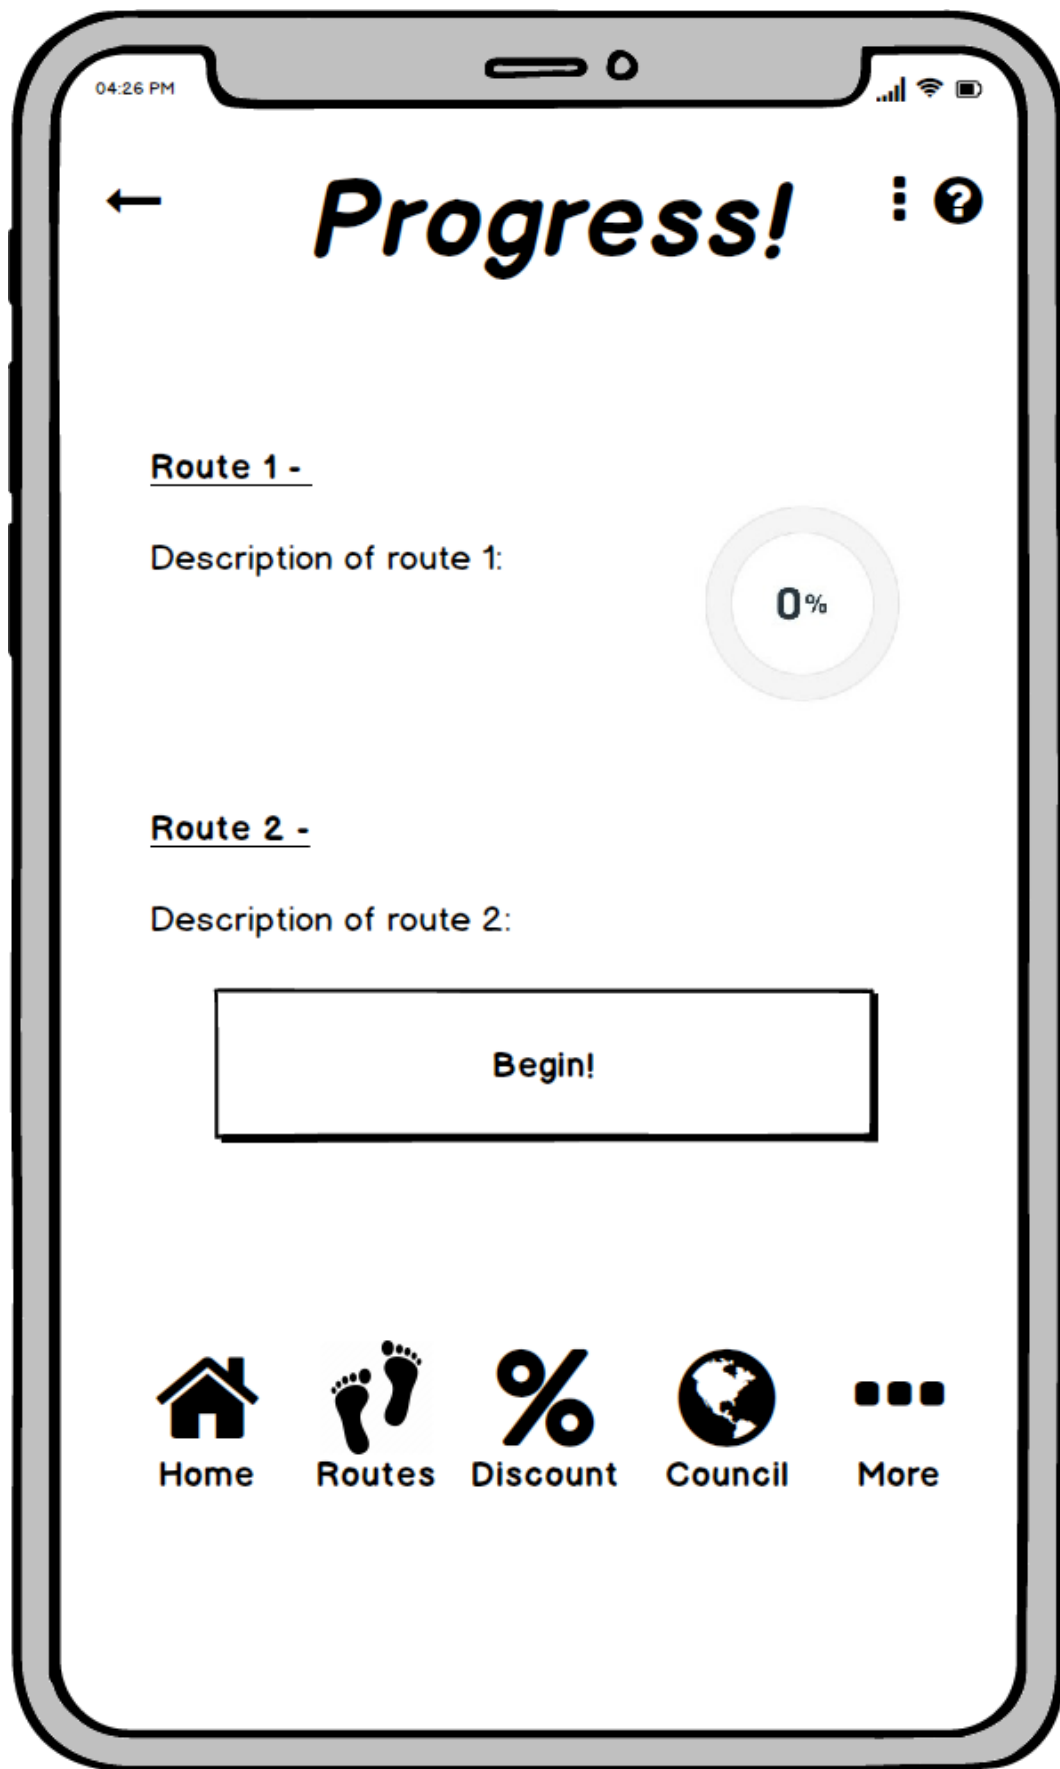

This is the Bicycle trail page.

Press start to begin.

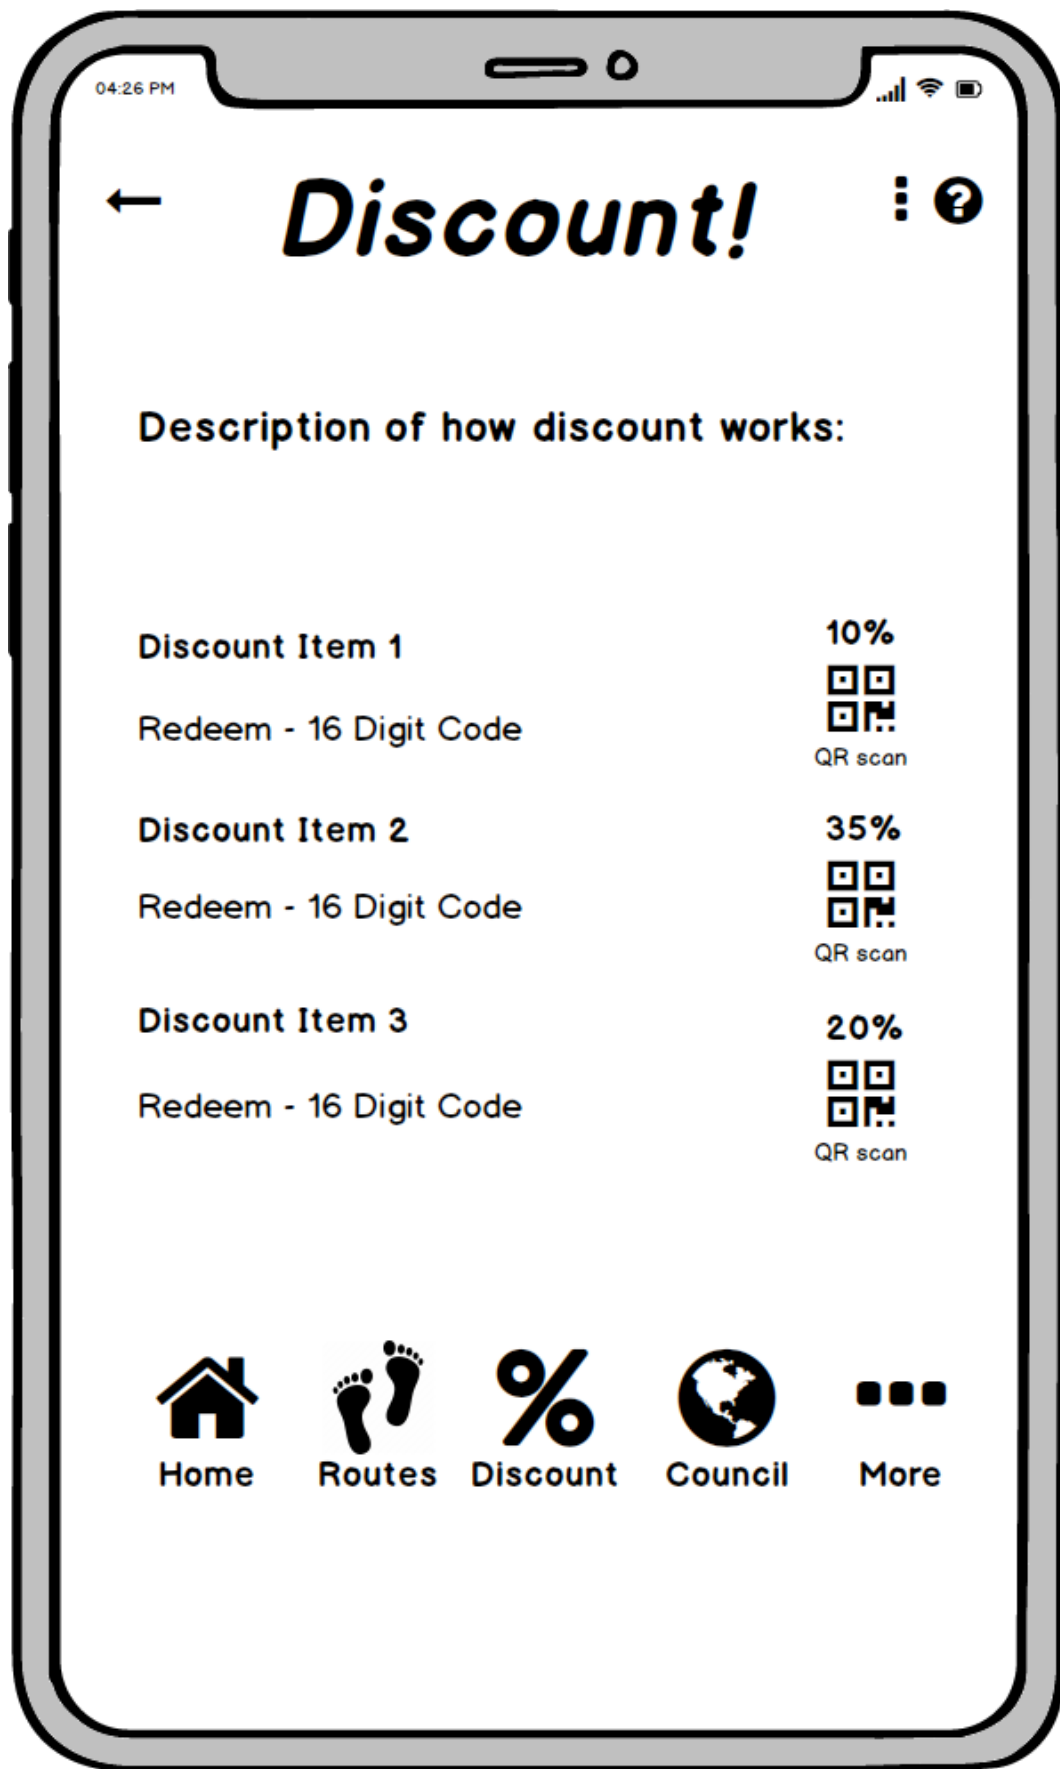

This is the skate trail page.

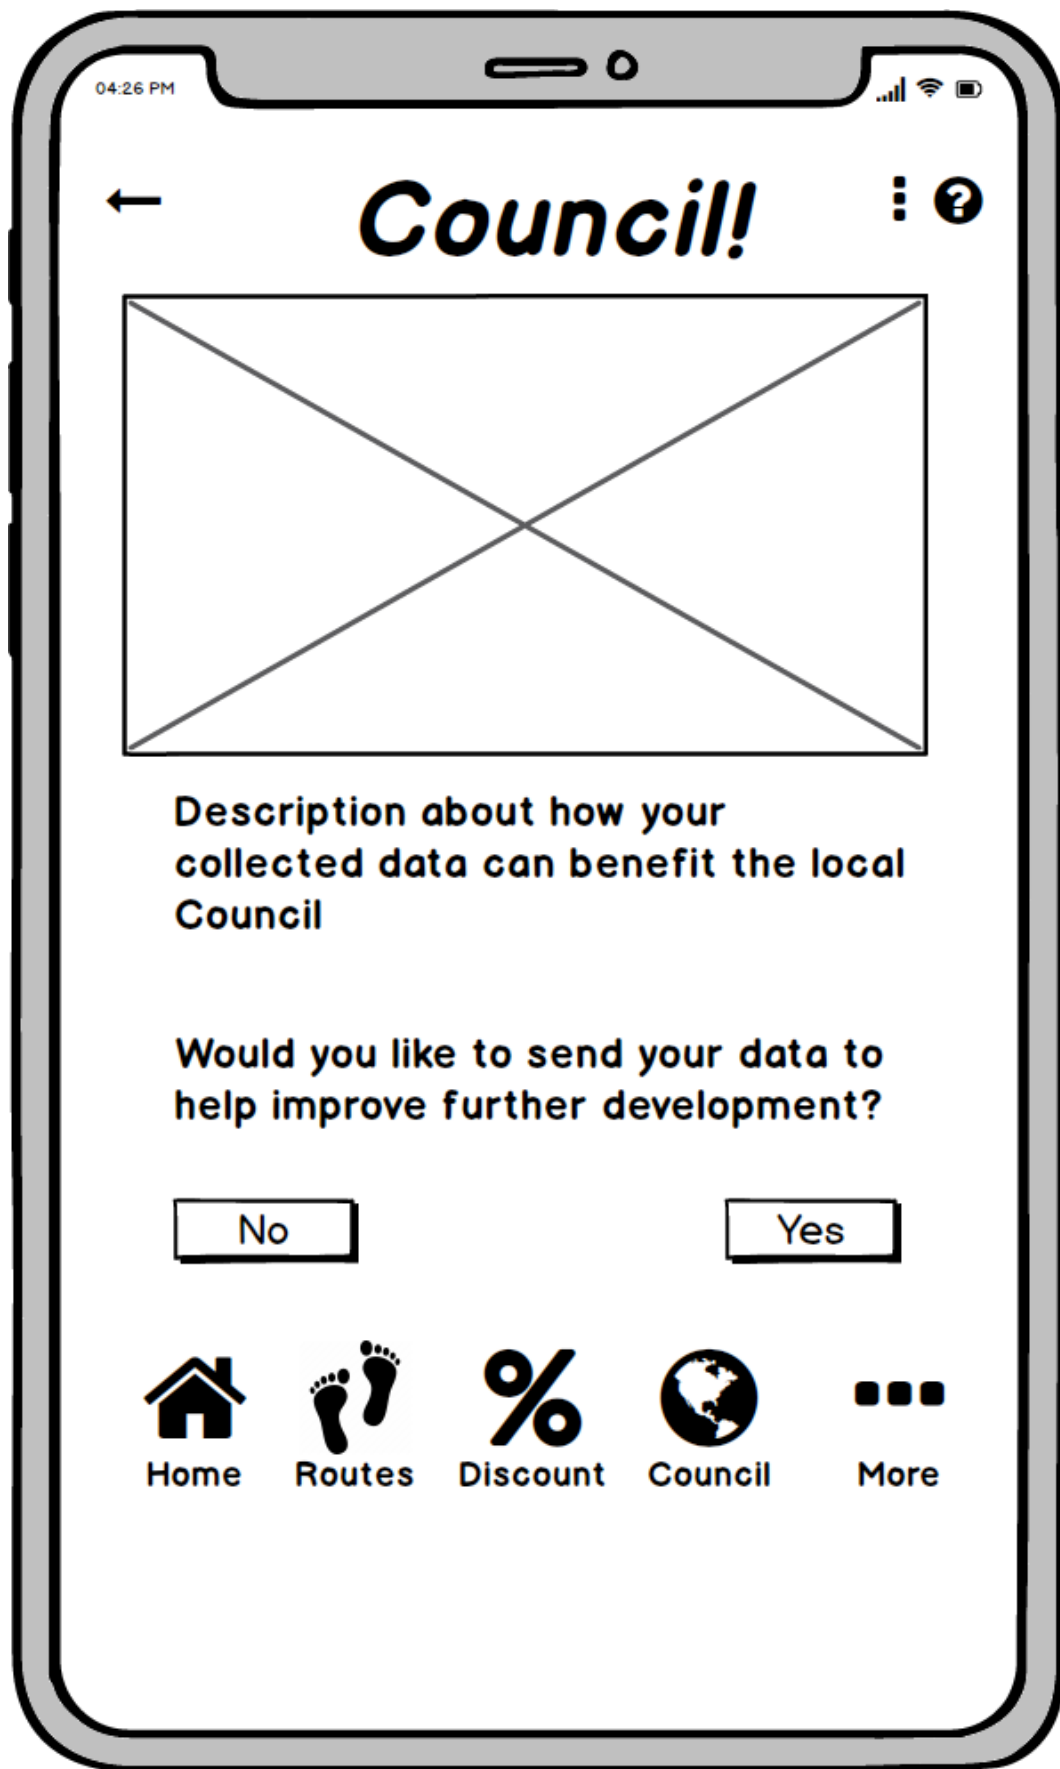

Press start to begin.

This is where you can keep track of your progress on selected routes.

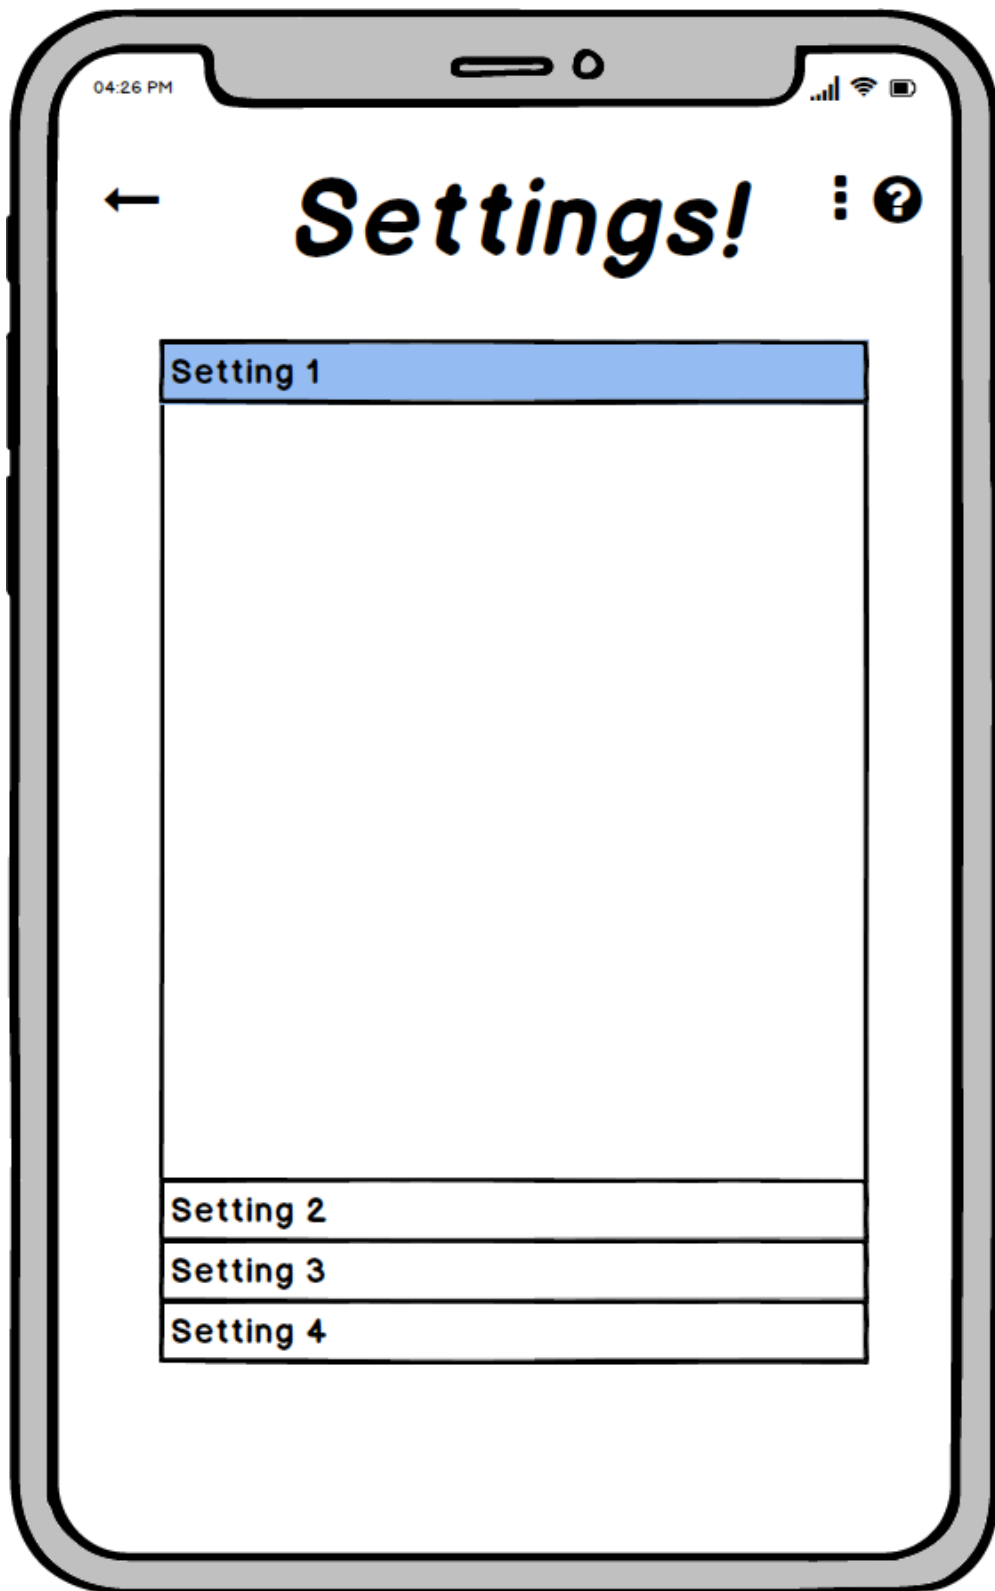

This is where you can unlock your discount from a QR scan or redeem code which will be essentially earnt from discount points.

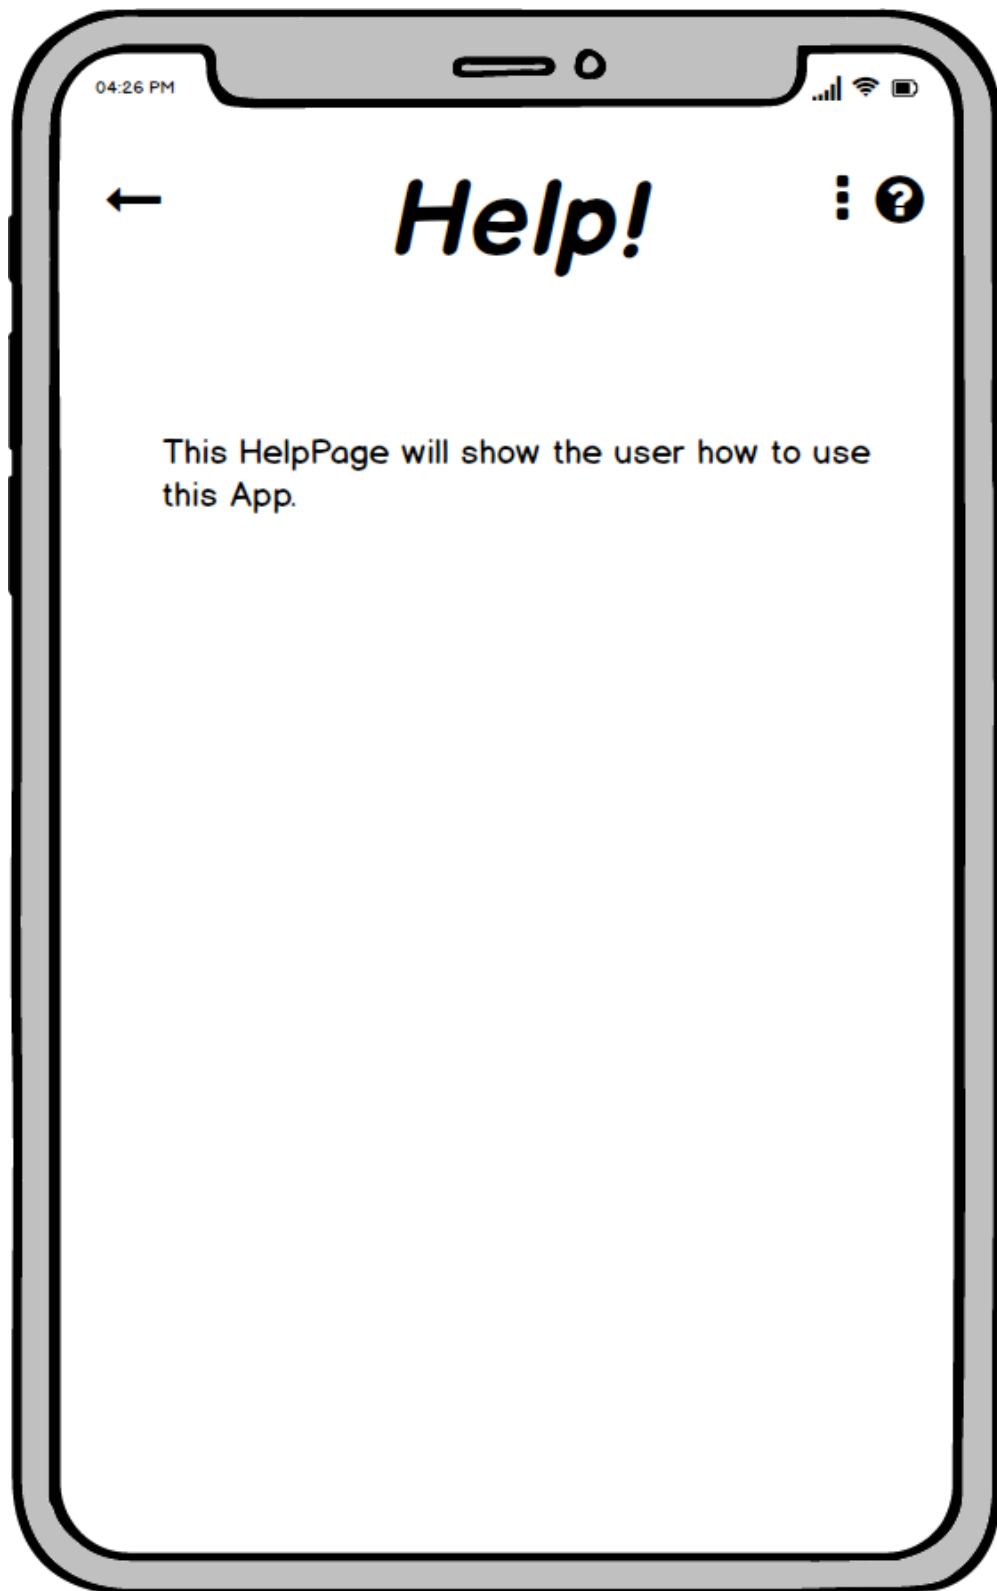

This is where you will be asked if you wish to send your data.

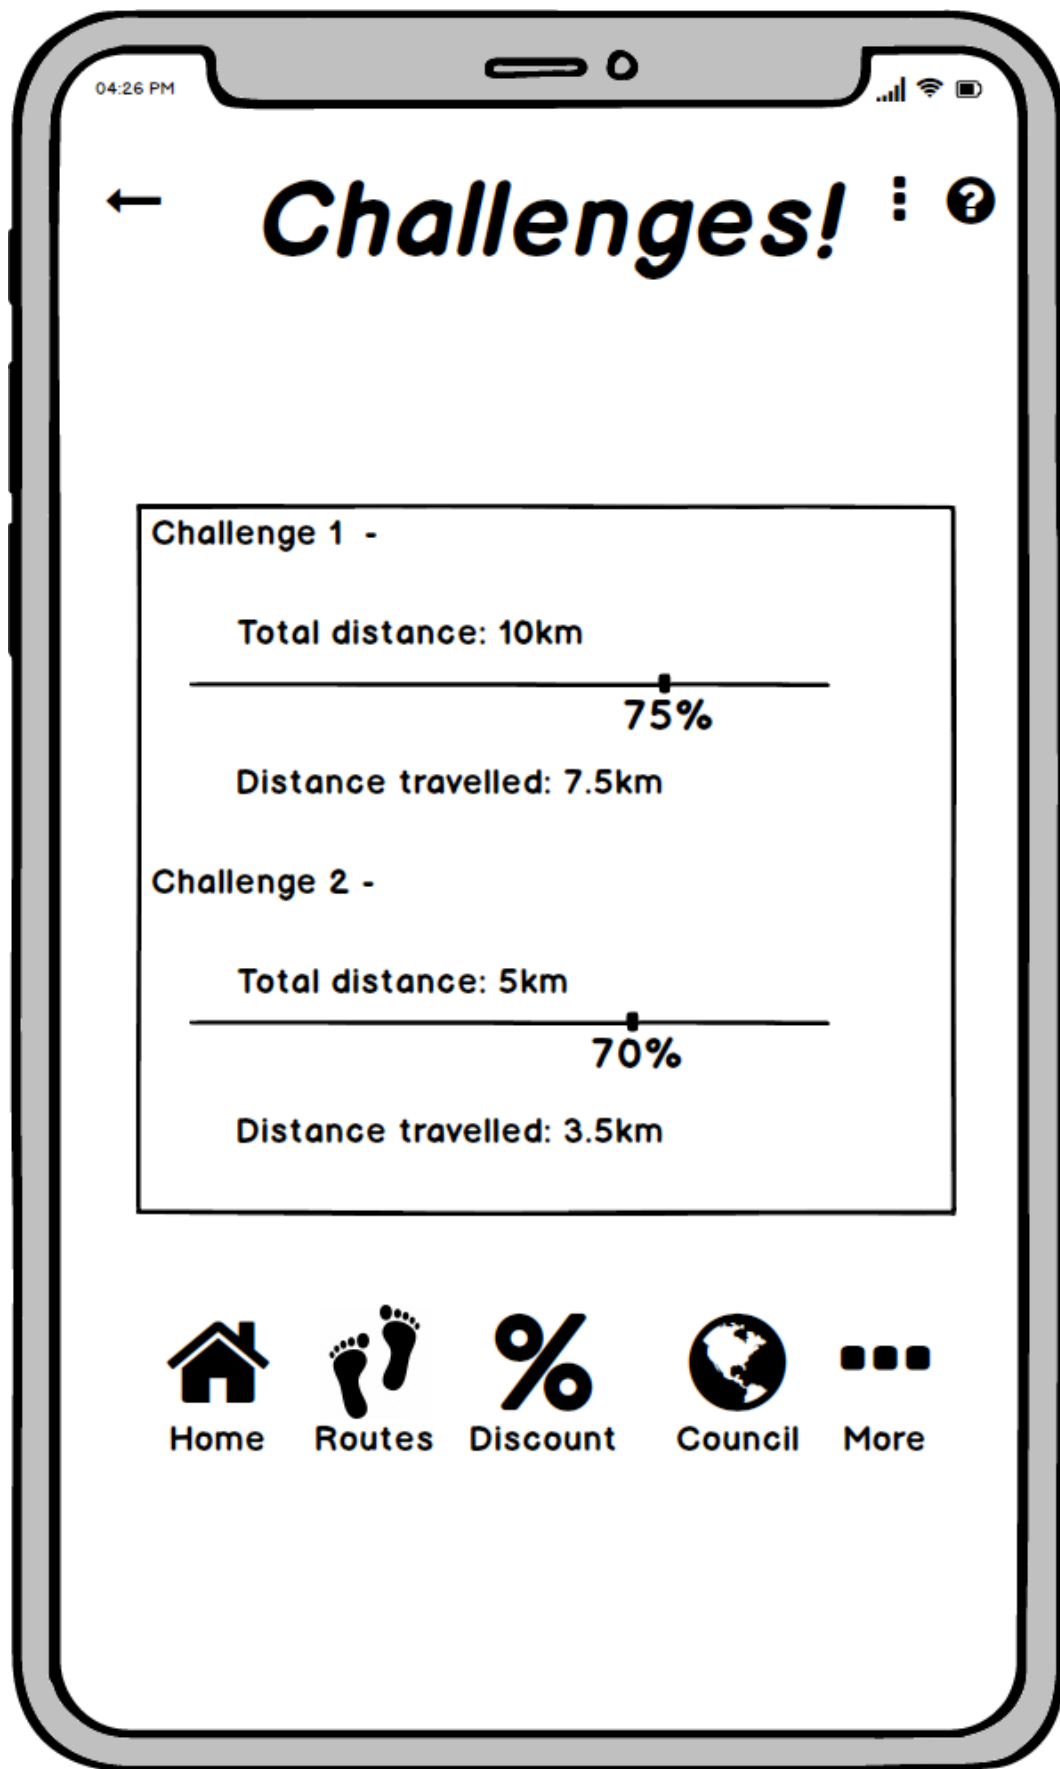

This page will contain content about settings and how you can manipulate the app to suit your display preference.

This is a help page for users who are stuck using the programme.

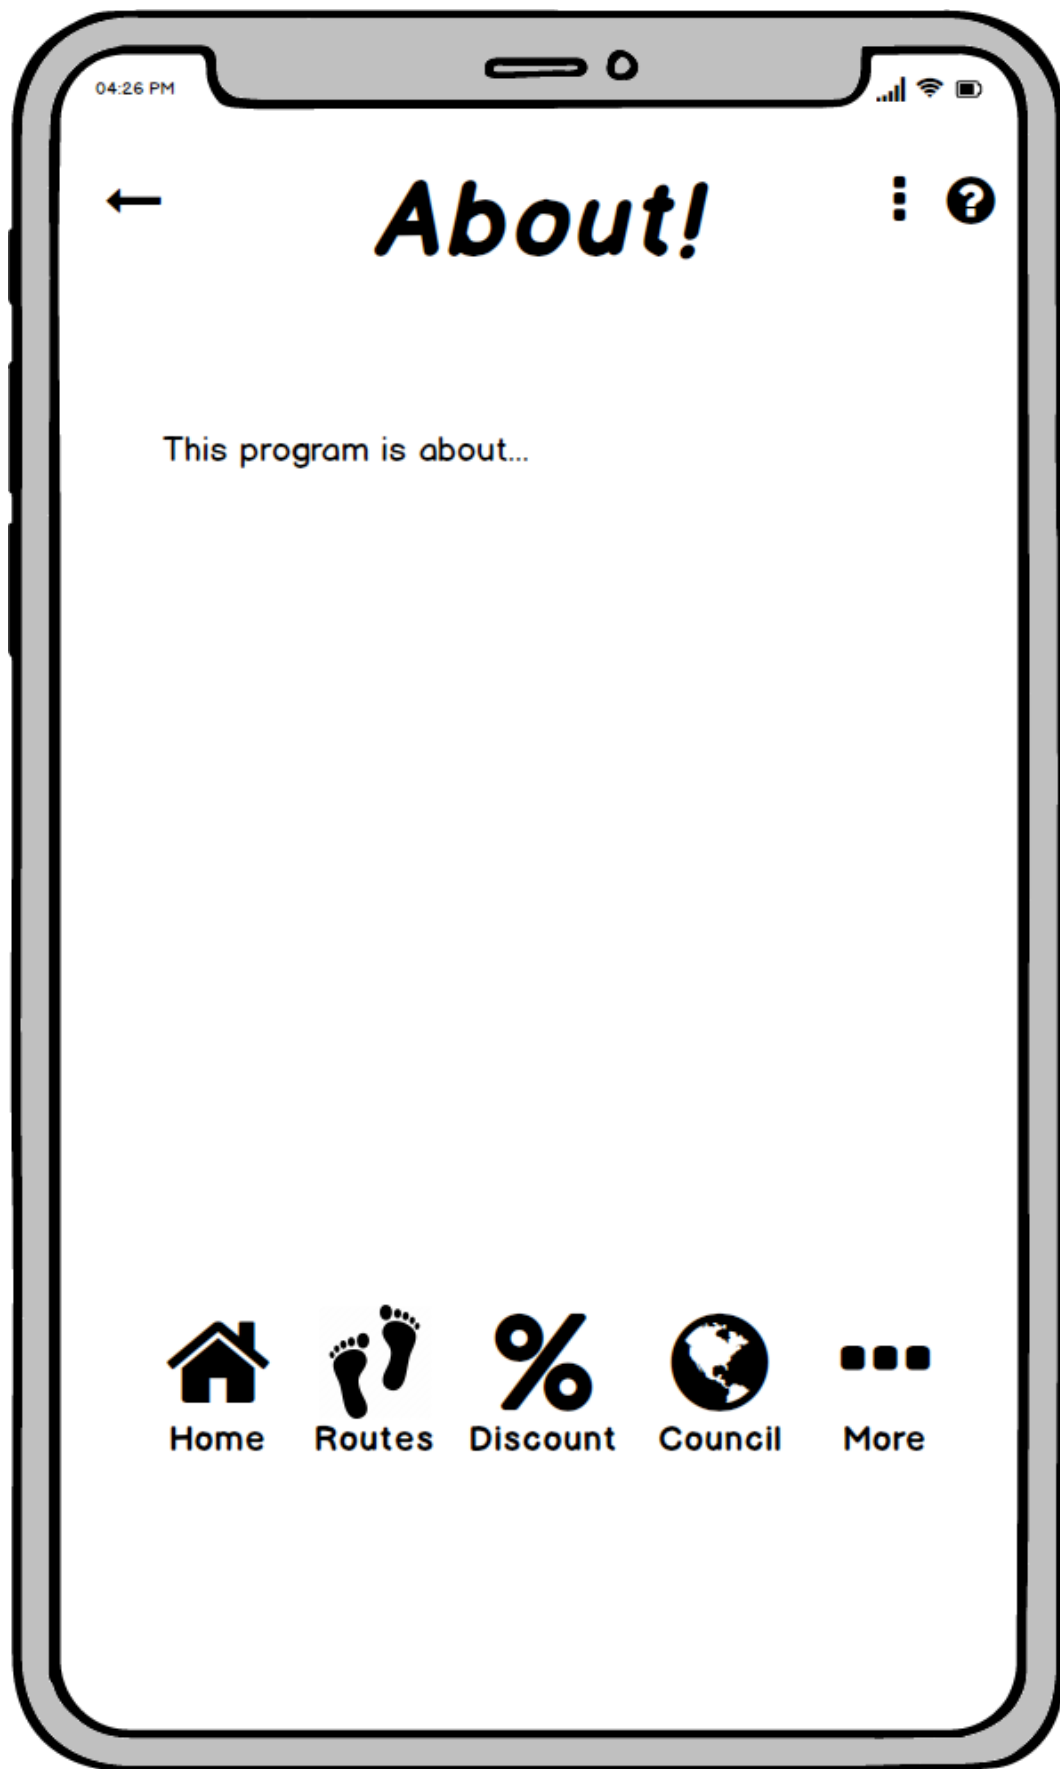

Our More tab is where you can find challenges, progress, sponsors and about.

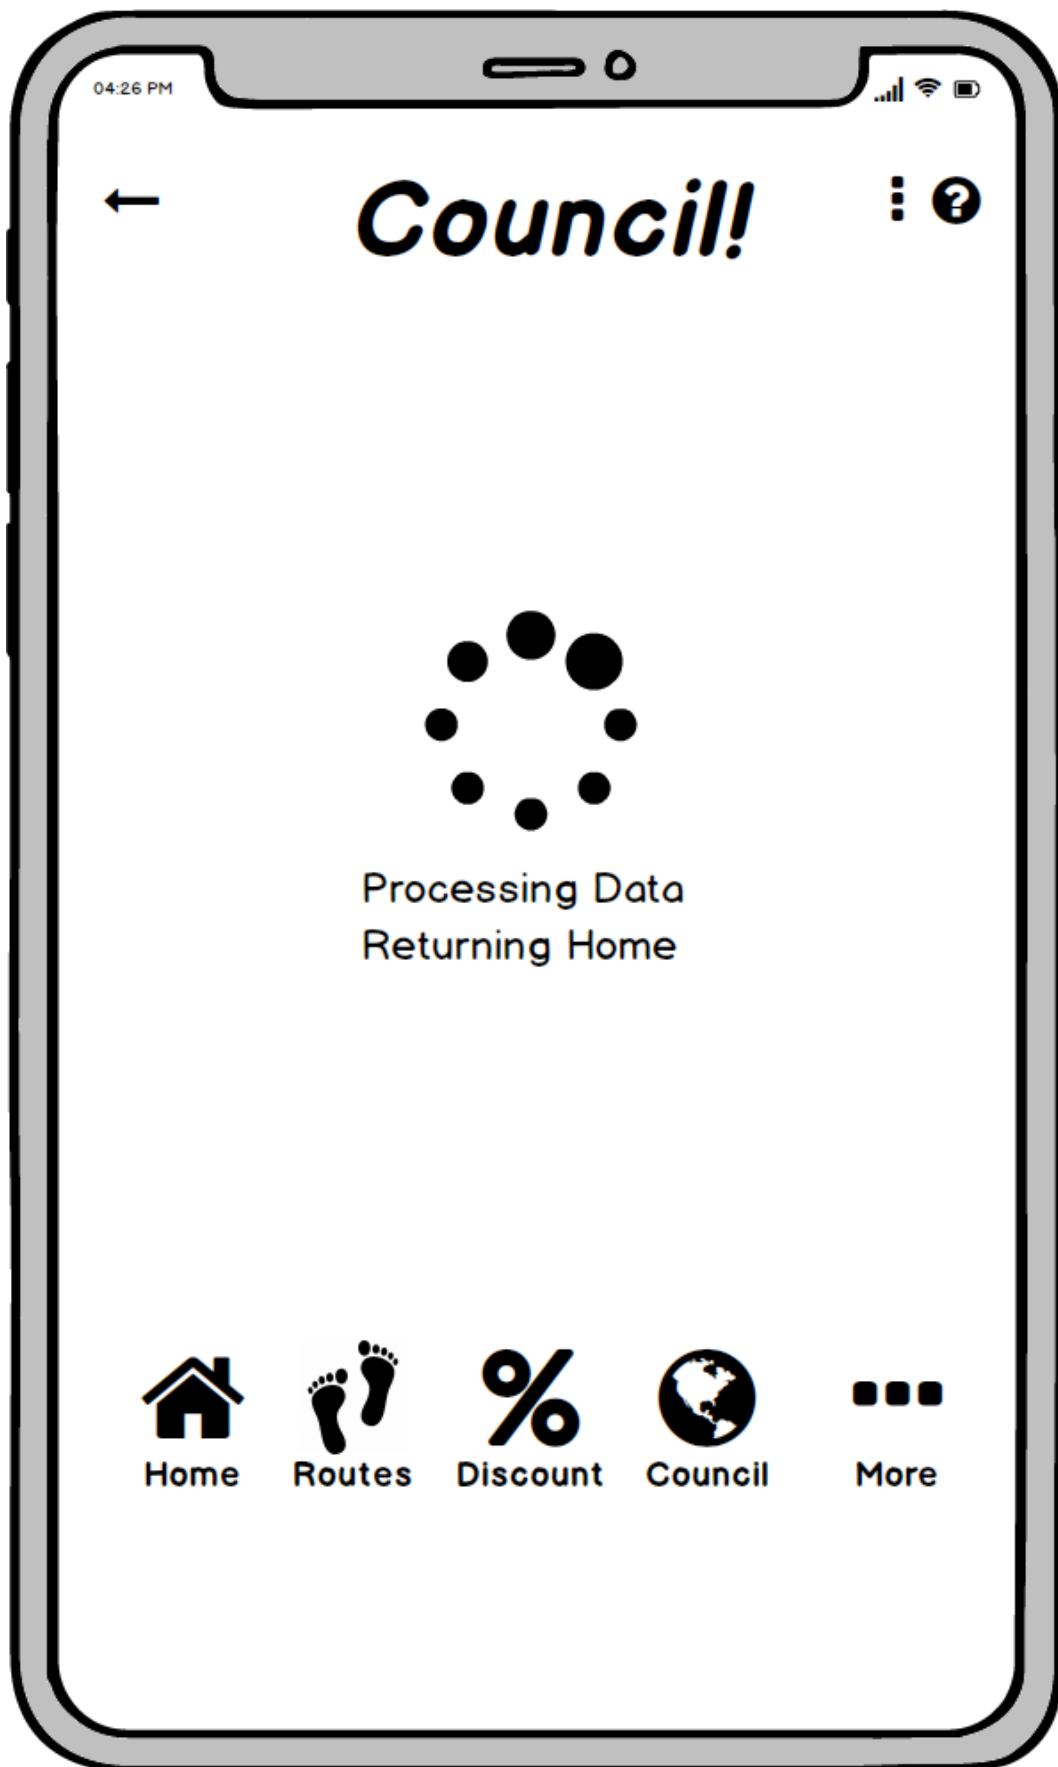

Challenges! will provide challenge events where you gain discount points. You can also track your challenges and its progress here.

If this prototype were to further develop and everything goes as planned, we will have this page to acknowledge our sponsors.

This will be a page  
about this program.

(App would save data but would not send it away.)

(For now, press loading icon to continue.)

(App would load and send data here automatically.)

(For now, press loading icon to continue.)

If they were to accept the data collection checkbox, they would be referred to this screen.
